

ADDITIONAL BENEFITS OF THE TRIPLE O SYSTEM

The Triple O System conditions and treats your water using the most effective, economical and proven technology available. In addition to the obvious benefits (removal of iron, manganese, H₂S, etc.) of our ozone treatment system, there are several not-so-obvious benefits you will soon be enjoying:

The high dissolved oxygen content of the water will make plants in your home and garden grow strong and healthy, and greatly reduce the need for fertilizers. In fact, studies have shown a 30% increase in plant growth when watered with ozonated water.

The same high oxygen content will make your laundry sparkling white with little or no bleach. Cooking with your new water will allow you to create dishes with more flavor and bouquet than imagined. Fruits and vegetables rinsed with high oxygen water will last much longer and stay much fresher.

The clean, fresh water will add a new dimension to bathing, dish washing, the car wash, etc.

The clean, fresh Triple O water will add a new dimension to your life in so many ways, including the ability to drink great water right from your tap, no more expensive bottled water needed.
