

# Dealer Requirements & Demonstration Suggestions

## To Become a Triple O Systems Inc. Dealer

First you must be in the water industry as a Well Driller, Pump Installer, Water Store, or Distributor for the water industry. Triple O typically requires that you belong to one of the association relating to the water industry (i.e. CGA, NGWA, WQA, etc.) Please **Contact** Triple O if interested in becoming a dealer.

## Getting Started

The suggested way to get started would be to contact your customers, who are known to have bad well or spring water, and to perform either a table top or in-tank demonstration on their water. Everyone will be amazed at how well this system cleans up that problem water. Remember, happy customers tell others, and this makes for a successful Triple O dealer.

We at Triple O Systems want to extend our support to all our dealers with regard to the application and installation of the Triple O ozone system. Simply stated, we want all installations to work and work well. To this end, for us to help you correctly apply and size the system, please have the following information available before contacting us:

1. Recent independent water test
2. Size of holding tank in gallons (if a tank exists)
3. Maximum 24 hour water usage

With the above information, we will be able to calculate if our system will work in your specific application. Or, you can fill out the **System Sizing Sheet** and FAX or E-mail the information.

## Table Top Demonstrator

Allows simple demonstration of Triple O's ability to oxidize and filter contaminants. Shows your customer that Triple O will work on *their* water.

This unit consists of a two gallon clear plastic jug, with miniature filter / diffuser, and a Triple O ozone generator. The generator includes a carrying handle and rubber feet which allow for portability and table top display. Within one hour, your customer will be able to view the dramatic results of the Triple O system and its ability to clear up their water.
