

TESTIMONIAL LETTERS

Thank you Triple O. I recently purchased one of your Triple O filter systems on April 15, 2015. It was installed in an above ground water tank that holds 3000 gallons. I must say that I was a little apprehensive that the system would do any good because my water was really gross. The Iron was at 6 ppm and the pH was 6. I've tried several other filter systems with no success whatsoever. So when I put this one in. I was very surprised that within a couple of days, water was crystal clear and all the smell was gone.

The water, before the filter, stunk so bad that you could smell somebody when they took a shower. Now, it's like I have mountain spring water thanks to Triple-O. Thank you very much. I called the office for some clarification and received excellent customer service.

Thanks again,
Dennis R.

After living in our Santa Cruz Mountain home for a few years we grew tired of the poor quality of our well water. The well water would ruin fixtures and appliances quickly and it was impossible to have really clean clothes and dishware. Even worse was the rotten egg smell. You would smell worse getting out of the shower than getting in! We considered getting water delivered but knew there had to be a more cost effective solution.

We asked around and people in our area suggested trying the Triple O ozone system for our well. After just a couple of days at work the Triple O system was delivering clear, fresh smelling water. Over 15 years later the Triple O system is still working perfectly. The maintenance on the system is pretty easy too. Just clean the diffuser and filter every couple of months and change the ozone lamp every two years.

I would recommend the Triple O system to anyone with problem well water.

Best Regards,
Mark D.

We had a Triple a Model TWTS-101 Ozone Water Treatment System installed at our Texas Hill Country home, and have been very happy with the resulting perfectly pure, safe and fresh water. The system has run continuously since installation in August 2009, circulating and purifying the water in our holding tank. Our water comes from a deep water well and requires disinfection. We chose the Triple a ozone system to clean our water because we did not want to use chlorine, and the Triple O ozone system requires very minimal (simple and fast) maintenance. I highly recommend the Triple O ozone water treatment system, and consider it a high quality product. Thank you Triple O for a clean water system that truly meets our needs!

We have had the Triple O system for the last 11 years. We have a well and there are high levels of iron and a very strong "rotten egg" smell, hydrogen sulfide. After installing the Triple O our water was fantastic. No more iron rings in toilets and no smell. We just had our first problem with the ballast going out. Easy fix and we are back online. Triple O has been a great investment with our water testing very well each time someone seems to want to do a test.

We recommend the system to anyone who has a well.

A simplistic system that STILL remains the same in a complex World

My name is Stephen Pizzo, I just got done talking to you about filter maintenance, and I must say that I have had your system since 1994 and to this day it continues to operate flawlessly. But, the one attribute of this system is its simplicity. It is simple to maintain, both from a parts replacement schedule and a filter changing schedule. I have been doing all the maintenance myself and I cannot express to you enough the satisfaction of that fact alone. Thank You!!

I want to thank Triple O for the customer support, which has always been FIVE STAR, and for its Triple O System.

Yours Truly,
Stephen P.

Our well is 30 years old and has a built up of rust and odor. Within 4 days of installation of the (Triple O) filtration system, we have clean. Clear, drinkable water from the tap.

I just changed the filters on the main house, 1 and 5 micron. The water from the tank was clear.

This is a wonderful system. We would recommend it to anyone. Our only regret is that we did not have this installed years ago.

Sincerely,
Eric L.

I feel incumbent to share with you our satisfaction with your system and its positive affect on our lifestyle.

I installed your Ozone system 5 or 6 years ago in response to a severe hydrogen sulfide problem and calcification / residue on my plumbing fixtures.

Although I have close to 5000 gallons of storage (required due to a low-flow producing well) - with an exposed but screened manhole opening for aeration, it could not eliminate the odor. This was not only unpleasant to breath /drink on a daily basis, but was particularly embarrassing for guests. The residue on my fixtures (faucets, sinks and toilets) was a constant source of aggravation and unpleasant to view.

The installation was easy, self-explanatory and took most of an afternoon. Additionally, the maintenance is minor and may be performed in a matter of minutes, so it is not considered a "chore".

Within days of installation of one of your systems, the odor was *completely* eliminated! After several weeks, almost all of the calcification/residue that had accumulated on my fixtures was gone. It was truly miraculous! My system has functioned flawlessly since its installation. I would highly recommend it to another family.

Sincerely,
Roger D.
